PROFESSIONAL SUMMARY

Software Engineering student (Anhanguera, 2026) with a solid background in logic, process optimization, and software development. Experienced with Python, Node.js, and SQL for script automation, API integrations, and workflow efficiency. 7+ years of industrial/technical experience at Razek, applying structured problem-solving, root-cause diagnosis, and quality control. Highly adaptable in Linux environments with an analytical approach to robotic and process automation.

TECHNICAL SKILLS

- **Programming & Scripting:** Python (Scripting, Automation), JavaScript (ES6+), SQL, HTML5/CSS3, Go.
- **Automation & Tools:** REST APIs, Process Automation Concepts, Git/GitHub, Power Automate / RPA fundamentals.
- **Frameworks & Databases:** Node.js, Angular, Relational Databases (SQL).
- **Environments & OS:** Advanced Linux (Arch Linux, Ubuntu) via CLI, Process Monitoring & Debugging.
- **Languages:** Portuguese (Native), English (Technical reading and documentation).

ACADEMIC BACKGROUND

- **B.S. in Software Engineering** – Faculdade Anhanguera (Graduation: 2026)
- **Technical Degree in Mechatronics** – SENAI (2018)

SELECTED PROJECTS

- **Operational Management System (Node.js & Angular):** Developed a web-based system focused on automating administrative and operational processes, integrating REST APIs, data persistence, and dynamic state management.
- **Automated Data Interface (Dynamic Portfolio):** Built an automated data parsing interface that reads and processes external spreadsheet files (.ods) to update frontend UI components without manual intervention.
- **Automation & Scripting Workflows (Linux/CLI):** Designed CLI-based shell/Python scripts for automated system configuration, log analysis, and routine maintenance across Linux distributions.

PROFESSIONAL EXPERIENCE

Razek | Mechatronics Technician *(January 2019 – Present)*

- Assemble, calibrate, and troubleshoot high-complexity electro-medical devices under strict regulatory and quality standards (ISO).
- Diagnose hardware and software integration failures, implementing corrective actions to ensure operational continuity.
- Map assembly workflows and suggest technical adjustments to optimize production times and eliminate recurring errors.

SOFT SKILLS

- Strong analytical thinking and debugging abilities.
- Highly organized with a focus on delivery culture and deadlines.
- Proactive learner regarding new technologies and performance metrics.
